

DESCRIPTION

ETC1

The electronic connectors model **ETC1** are timers with cyclical repetition of control. The load is supplied as soon as the power is switched on. The trimmer "ON" controls the ON-time for valve energising, whilst trimmer "OFF" sets the interval between two sequential times. The sequence is repeated for as long as the power supply remains connected. A "TEST" button is provided and two leds are used to show the state of the timer.

Note: The timer is supplied equipped with IP65 connector.
